RESEARCH INTEREST

Randomized Methods for Matrix Approximation, Model Compression for NLP, Sublinear Algorithms, Machine Learning, Numerical Linear Algebra.

Broadly, I am interested in developing computationally efficient algorithms. I design fast algorithms using numerical linear algebra with applications in machine learning and data science. Recently, I have been focusing on sublinear algorithms for matrices – algorithms that operate in less time than the number of inputs. The core of my work revolves around pushing the boundaries of sublinear time or sublinear query algorithms in the context of matrices and their applications.
