RESEARCH INTEREST

Randomized Methods for Matrix Approximation, Model Compression for NLP, Sublinear Algorithms, Machine Learning, Numerical Linear Algebra.

I design computationally efficient algorithms using numerical linear algebra, with applications in machine learning. Broadly, my work can be seen as a set of tools that can be utilized to accomplish various tasks within neural networks, including model compression, designing fast learning functions, and the study of memorization. The central focus of my work revolves around pushing the boundaries of sublinear time or sublinear query algorithms in the context of matrices and their practical applications.
